Lourdes Inpatient Physical Rehabilitation admitted 180 patients in 2016 to our intensive therapy program.

Average length of stay overall: 12.3 days.
Average age: 73.5 years old; no adolescents were admitted in 2016. Some patients recovered faster while others required a longer stay.

Where did patients go after they were discharged?
- 86.7% returned home or to another independent living setting
- 4.4% went back to an Acute Medical Unit
- 8.9% were transitioned into a sub-acute therapy facility such as hospice, mental health facility, long term care hospital, custodial care facility and/or secured facility

In 2016, how did Lourdes Rehabilitation care improve?
- Reducing preventable falls and infections to all persons served is our highest priority
- DECREASED falls with injuries in 2016 to 0.42%
- NO urinary tract infections associated with indwelling catheters for over three and a half years
- NO MRSA or VRE infections occurred
- ZERO pressure ulcers worsened or occurred

How effective was treatment received?
Lourdes Acute Rehab continues to be recognized by UDSMR, a national data collection center, for it’s effective, efficient, safe, timely and patient centered care, leading to successful discharge home.

Comments received from persons and their families served:
“The care I received was not only skilled, respectful and thoughtful; it went beyond what rehabilitation is and does. Each of the staff was kind and thoughtful. Their care and kindness allowed me to make the most of my experience there.”

“My mother received excellent care and improved remarkably, this is the best care my mom has ever had in any hospital.”
